## I- (2 points)

In the table below, only one of the proposed answers to each question is correct. Write down the number of each question and give, with justification, the answer corresponding to it.

| $\mathrm{N}^{\circ}$ | Questions | Answers |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | a | b | c |
| 1 | z is a complex number. <br> One of the roots of the equation $z^{4}+z^{2}-i \sqrt{3}=0$ is | $e^{i \frac{\pi}{6}}$ | i | $e^{-i \frac{\pi}{6}}$ |
| 2 | Denote by f the function defined on $\mathbb{R}$ as $\mathrm{f}(\mathrm{x})=\frac{1}{\mathrm{x}^{2}+4 \mathrm{x}+8}$. <br> An antiderivative of $f$ is | $\frac{1}{2} \arctan \left(\frac{\mathrm{x}+2}{2}\right)$ | $\frac{1}{4} \arctan \left(\frac{x+2}{2}\right)$ | $\arctan (\mathrm{x}+2)$ |
| 3 | $m$ is a real number $(m>1)$. <br> If $J=\int_{m}^{m+1} \frac{1}{x} d x$, then $J$ belongs to the interval | [m, m+1] | $] 0, \frac{1}{\mathrm{~m}+1}[$ | $\left[\frac{1}{m+1}, \frac{1}{m}\right]$ |
| 4 | z is a complex number. <br> If $z=1+\cos \theta+i \sin \theta$, with $\pi<\theta<2 \pi$, then $\|z\|=$ | $2 \cos \left(\frac{\theta}{2}\right)$ | $-2 \cos \left(\frac{\theta}{2}\right)$ | $\sqrt{2}$ |

## II- (2 points)

In the space referred to an orthonormal system $(\mathrm{O} ; \overrightarrow{\mathrm{i}}, \overrightarrow{\mathrm{j}}, \overrightarrow{\mathrm{k}})$, consider the plane $(\mathrm{P})$ with equation $\mathrm{x}+\mathrm{z}=0$
and the line (d) with parametric equations $\left\{\begin{array}{l}x=-t+1 \\ y=-2 t \\ z=3 t+1\end{array} \quad(t \in \mathbb{R})\right.$.

1) Calculate the coordinates of point $A$, the intersection of (d) and ( P ).

2) The point $B(1,0,1)$ is on (d).
a- Show that O is the orthogonal projection of B on $(\mathrm{P})$.
b- Deduce a system of parametric equations of the line ( $\Delta$ ), the orthogonal projection of (d) on (P).
3) The point $\mathrm{J}(-5,2,5)$ is on (P).

Calculate the volume of the tetrahedron OBJA.
4) In the plane $(\mathrm{P})$, consider the hyperbola $(\mathrm{H})$ with foci O and A and eccentricity $\mathrm{e}=3$.
a- Verify that the point $\mathrm{I}(1,1,-1)$ is the center of $(\mathrm{H})$.
b- Calculate the coordinates of S and G, the two vertices of (H).

## III- (3 points)

Consider two fair cubic dice. The faces of each die are numbered from 1 to 6 .
The two dice are rolled.
Denote by X the random variable that is defined as follows:

- if the two numbers shown on the dice are different, then X is equal to the greater between them;
- if the two numbers shown on the dice are equal, then X is equal to one them.

For example,

- if the two numbers shown on the dice are 2 and 3, then $X=3$
- if the two numbers shown on the dice are 4 and 4 , then $X=4$

1) a- Calculate the probabilities $\mathrm{P}(\mathrm{X}=1)$ and $\mathrm{P}(\mathrm{X}=2)$.
b- Prove that $\mathrm{P}(\mathrm{X} \leq 3)=\frac{1}{4}$.
2) In this part, consider an urn $U$ that contains 6 balls: 4 red and 2 blue.

The two dice are rolled:

- if $X \leq 3$, then 3 balls are randomly and simultaneously selected from $U$;
- if $\mathrm{X}>3$, then 3 balls are selected randomly and successively with replacement from U .

Consider the following events:
A: "X $\leq 3$ "
S: "The 3 selected balls have the same color"
a- Calculate $\mathrm{P}(\mathrm{S} / \mathrm{A})$ and $\mathrm{P}(\mathrm{A} \cap \mathrm{S})$.
b- Verify that $\mathrm{P}(\overline{\mathrm{A}} \cap \mathrm{S})=\frac{1}{4}$ and calculate $\mathrm{P}(\mathrm{S})$.
c- Knowing that $\mathrm{X}>3$, calculate the probability that the three selected balls do not have the same color.

## IV- (3 points)

In the adjacent figure,

- F and $\mathrm{F}^{\prime}$ are two fixed points so that $\mathrm{FF}^{\prime}=2$.
- N is a variable point on the circle with center $\mathrm{F}^{\prime}$ and radius 4.
- The perpendicular bisector of [NF] intersects [F'N] at M.
- B is a fixed point so that $\mathrm{BF}^{\prime} \mathrm{F}$ is an equilateral triangle.

1) a- Show that MF $+M F^{\prime}=4$.
b- Deduce that M moves on a conic (E) whose nature, foci and center O are to be determined.
2) Let $A$ be the symmetric of $O$ with respect to $F$.

a- Show that $A$ is one of the vertices of (E).
b- Determine the non-focal axis of ( E ) and verify that B is one of the vertices of $(\mathrm{E})$.
c- Draw (E).
3) The plane is referred to a direct orthonormal system $(O ; \vec{i}, \vec{j})$ with $\vec{i}=\overrightarrow{\mathrm{OF}}$. a- Verify that $\frac{x^{2}}{4}+\frac{y^{2}}{3}=1$ is an equation of (E).
b- Write an equation of (d) the directrix of (E) associated to F.
c- Let $\mathrm{L}(\alpha, \beta)$ be a point on (E) where $\alpha$ and $\beta$ are two real numbers with $\beta \neq 0$. Write an equation of the tangent $(\mathrm{T})$ to $(\mathrm{E})$ at L .

## V- (3 points)

In the figure below,

- OACD is a direct square with center E and side 2 .
- $F$ is the symmetric of C with respect to D .
- B is the symmetric of O with respect to D.

Denote by S the direct plane similitude of center O that maps A onto B.

## Part A

1) a- Calculate the ratio $k$ and an angle $\alpha$ of $S$.
b- Verify that $S(E)=F$.
c- Show that the triangle OBF is right isosceles.
2) Consider the direct plane similitude $S^{\prime}\left(E, 2, \frac{\pi}{2}\right)$ and the transformation $h=S \circ S^{\prime}$.

Denote by W the center of $h$. Show that $\overrightarrow{\mathrm{WF}}=-4 \overrightarrow{\mathrm{WE}}$.

## Part B

The plane is referred to a direct orthonormal system $(\mathrm{O} ; \overrightarrow{\mathrm{u}}, \overrightarrow{\mathrm{v}})$ with $\overrightarrow{\mathrm{u}}=\frac{1}{2} \overrightarrow{\mathrm{OA}}$.

1) Show that the complex form of $h$ is $z^{\prime}=-4 z+2+6 i$ and deduce the affix of $W$.
2) For all $n \in \mathbb{N}$, consider the numerical sequence $\left(d_{n}\right)$ defined as $d_{n}=W E_{n}$ where $E_{0}=E$ and $\mathrm{E}_{\mathrm{n}+1}=\mathrm{h}\left(\mathrm{E}_{\mathrm{n}}\right)$.
a- Verify that $\mathrm{d}_{0}=\frac{\sqrt{10}}{5}$.
b- Show that $\left(d_{n}\right)$ is a geometric sequence of common ratio 4 .
c- Determine the number of points $E_{n}$ such that $d_{n}<2019$.

## VI- (7 points)

## Part A

Consider the differential equation (E): $y^{\prime \prime}-2 y^{\prime}+y=e^{2 x}$ and let $y=z+e^{2 x}$.

1) Write a differential equation ( $E^{\prime}$ ) satisfied by $z$.
2) Determine the general solution of ( E ).
3) Determine the particular solution of ( E ) whose representative curve, in an orthonormal system, has at the point $\mathrm{A}(0,-2)$ a tangent parallel to the x -axis.

## Part B

Let $f$ be the function defined on $\mathbb{R}$ as $f(x)=e^{2 x}+(x-3) e^{x}$.
Denote by (C) the representative curve of $f$ in an orthonormal system $(O ; \vec{i}, \vec{j})$.

1) Determine $\lim _{x \rightarrow+\infty} f(x)$ and $\lim _{x \rightarrow+\infty} \frac{f(x)}{x}$.
2) Determine $\lim _{x \rightarrow-\infty} f(x)$ and deduce an asymptote to (C).
3) Let $g$ be the function defined on $\mathbb{R}$ as $g(x)=x-2+2 e^{x}$.
a- Set up the table of variations of the function $g$.
b- Calculate $g(0)$ then deduce, according to the values of $x$, the sign of $g(x)$.
4) Verify that $f^{\prime}(x)=e^{x} g(x)$ and set up the table of variations of the function $f$.
5) Show that the equation $f(x)=0$ has, on $\mathbb{R}$, a unique root $\alpha$. Verify that $0.7<\alpha<0.8$.
6) Draw the curve (C).
a- Prove that f has, over $\left[0,+\infty\left[\right.\right.$, an inverse function $\mathrm{f}^{-1}$ and determine its domain of definition.
b- Draw the representative curve $\left(\mathrm{C}^{\prime}\right)$ of $\mathrm{f}^{-1}$ in the same system $(\mathrm{O} ; \overrightarrow{\mathrm{i}}, \overrightarrow{\mathrm{j}})$.
c- Calculate, in terms of $\alpha$, the area of the region bounded by ( $C^{\prime}$ ), the $x$-axis and the $y$-axis.

## Part C

Let $h$ be the function given by $h(x)=\arcsin \left(\mathrm{f}^{-1}(\mathrm{x})\right)$.
Show that the domain of definition of the function $h$ is $\left[-2, e^{2}-2 e\right]$.
