## I- (2 points)

In the space referred to a direct orthonormal system $(O ; \vec{i}, \vec{j}, \vec{k})$, consider the point $E(-2 ; 0 ; 1)$ and the line $(\mathrm{d})$ defined as $\mathrm{x}=\mathrm{m}-1, \mathrm{y}=2 \mathrm{~m}, \mathrm{z}=\mathrm{m}+2$ where $\mathrm{m} \in \mathbb{R}$.

1) a- Verify that $E$ is not on (d).
$b-$ Show that $x-z+3=0$ is an equation of plane $(P)$ determined by $E$ and (d).
2) Consider in the plane $(\mathrm{P})$ the circle $(\mathrm{C})$ with center $\mathrm{I}(-3 ;-1 ; 0)$ and radius $\sqrt{3}$.
a- Show that line $(\mathrm{d})$ is tangent to circle $(\mathrm{C})$ at point $\mathrm{F}(-2 ;-2 ; 1)$.
b- Verify that $E$ is on $(C)$ and determine the coordinates of point $A$ on (d) so that (AE) is tangent to (C).
3) Denote by $(\Delta)$ the line perpendicular to (P) at I.
a- Write a system of parametric equations of $(\Delta)$.
b- Calculate the coordinates of point M on $(\Delta)$ so that the volume of tetrahedron MIEF is equal to 2 cubic units. $\left(x_{M} \neq 0\right)$

## II- (3 points)

Consider a fair cubic die numbered from 1 to 6 and two urns $U_{1}$ and $U_{2}$.
$\mathrm{U}_{1}$ contains 4 blue balls, 3 red balls and 1 green ball.
$\mathrm{U}_{2}$ contains 4 blue balls, 2 red balls and 2 green balls.
A game consists of rolling the die once.

- If the die shows the face numbered 1 or 2 , then three balls are randomly and simultaneously selected from $\mathrm{U}_{1}$,
- Otherwise, three balls are randomly and simultaneously selected from $\mathrm{U}_{2}$.

Consider the follwing events:
A: « the die shows the face numbered 1 or $2 »$
B: « the three selected balls have the same color»
$\mathrm{C}:$ «no red ball is obtained among the three selected balls »

1) a- Calculate the probability $\mathrm{P}(\mathrm{B} / \mathrm{A})$ and show that $\mathrm{P}(\mathrm{A} \cap \mathrm{B})=\frac{5}{168}$.
b- Calculate $\mathrm{P}(\mathrm{B})$.
2) a- Verify that $\mathrm{P}(\mathrm{C})=\frac{25}{84}$.
b- Knowing that no red ball is obtained among the three selected balls, calculate the probability that the die shows a face with number greater than or equal to 3 .
3) Let $X$ be the random variable equal to the number of green balls obtained among the three selected balls.
a- Determine the probability distribution of $X$.
b- If this game is repeated 160 times, estimate then the number of green balls obtained.

## III- (2 points)

Consider the sequence $\left(U_{n}\right)$ defined as : $U_{n}=\int_{0}^{1} \frac{x^{2 n}}{1+x^{2}} d x$ where $n \in \mathbb{N}$.

1) a- Calculate $U_{0}$.
b- Calculate $\mathrm{U}_{0}+\mathrm{U}_{1}$ and deduce $\mathrm{U}_{1}$.
2) a- For all $n \in \mathbb{N}$, show that $U_{n} \geq 0$.
b- For all $0 \leq x \leq 1$, prove that $\left(U_{n}\right)$ is decreasing.
c- Deduce that $\left(\mathrm{U}_{\mathrm{n}}\right)$ is convergent.
3) a- For all $n \in \mathbb{N}$, show that $U_{n+1}+U_{n}=\frac{1}{1+2 n}$.
b- Deduce the limit of $U_{n}$ as $n$ tends to $+\infty$.

## IV- (3 points)

Consider in a plane ( P ) a line ( d ) and a point F .
Let O be the orthogonal projection of F on (d) with $\mathrm{OF}=3$.
Let A be the symmetric of O with respect to F and $\mathrm{A}^{\prime}$ the point on segment $[\mathrm{OF}]$ such that $\mathrm{OA}^{\prime}=2$. In the plane ( P ), consider the ellipse (E) with
focus F , associated directrix (d) and eccentricity $\frac{1}{2}$.

## Part A

1) a- Verify that $A$ and $A^{\prime}$ are two vertices of (E).
b- Determine the center I of (E) and its second focus G.
2) Denote by $B$ and $B^{\prime}$ the vertices of ( E ) on the non-focal axis.
a- Calculate $\mathrm{AA}^{\prime}$ and verify that $\mathrm{BB}^{\prime}=2 \sqrt{3}$.
b- Draw (E).

## Part B

The plane (P) is referred to an orthonormal system $(\mathrm{O} ; \overrightarrow{\mathrm{i}}, \overrightarrow{\mathrm{j}})$ such that $\overrightarrow{\mathrm{i}}=\frac{1}{3} \overrightarrow{\mathrm{OF}}$.

1) Verify that an equation of (E) is: $3 x^{2}+4 y^{2}-24 x+36=0$.
2) Let $L$ be the point of $(E)$ with abscissa $3\left(y_{L}>0\right)$.
a- Write an equation of $(T)$, the tangent at $L$ to (E).
b- Denote by $K$ the point of intersection of $(T)$ with the non-focal axis of (E).
Calculate the area of the region inside triangle OIK and outside ellipse (E).

## V- (4 points)

In an oriented plane, consider a triangle ABC right angled at A such that $\mathrm{AB}=4, \mathrm{AC}=6$ and $(\overrightarrow{\mathrm{AB}}, \overrightarrow{\mathrm{AC}})=\frac{\pi}{2}[2 \pi]$.

Denote by E the orthogonal projection of point A on line ( BC ).
Let S be the direct plane similitude that maps B onto A and A onto C .

1) Calculate the ratio (scale factor) $k$ of $S$ and find a measure of angle $\alpha$ of $S$.
2) a- Determine the image of line (AE) under $S$ and the image of line (BC) under $S$.
b- Deduce that E is the center of S .
3) $\operatorname{Let} \mathrm{F}=\mathrm{S}(\mathrm{C})$.
a- Prove that $\mathrm{A}, \mathrm{E}$ and F are collinear.
b- Show that (CF) is parallel to (AB).
c- Construct F and calculate CF.
4) Denote by h the dilation that maps A onto B and with ratio $\frac{-1}{3}$.
a- Determine $\mathrm{S} \circ \mathrm{h}(\mathrm{A})$.
b- $\mathrm{S} \circ \mathrm{h}$ is a direct plane similitude.
Determine its center, its ratio and a measure of its angle.
5) The complex plane is referred to a direct orthonormal system $(A ; \vec{u}, \vec{v})$ with $\overrightarrow{\mathrm{u}}=\frac{1}{4} \overrightarrow{\mathrm{AB}}$ and $\overrightarrow{\mathrm{v}}=\frac{1}{6} \overrightarrow{\mathrm{AC}}$.
a- Write the complex form of $\mathrm{S} \circ \mathrm{h}$.
b- Calculate the affix of point $\mathrm{B}^{\prime}=\mathrm{S} \circ \mathrm{h}(\mathrm{B})$.
c- Let $(\mathrm{P})$ be the parabola with vertex A and focus B and $\left(\mathrm{P}^{\prime}\right)$ be the image of ( P ) under $\mathrm{S} \circ \mathrm{h}$.
Write an equation of $\left(\mathrm{P}^{\prime}\right)$.

## VI- (6 points)

## Part A

1) Verify that $\int \ln x d x=x \ln x-x+k$ where $k$ is a real constant and $x>0$.
2) Consider the differential equation (E) satisfied by $y: x y^{\prime}+y=-1-2 x-2 \ln x$ where $y$ is a function of $x(x>0)$.
Let $\mathrm{z}=\mathrm{xy}$.
a- Form a differential equation $\left(E^{\prime}\right)$ satisfied by $z$ and solve ( $E^{\prime}$ ).
b- Deduce the particular solution of $(E)$ such that $y(1)=0$.

## Part B

Consider the two functions g and f defined over $] 0 ;+\infty[$ as $g(x)=1-\mathrm{x}-2 \ln \mathrm{x}$
and $f(x)=\frac{x+\ln x}{x^{2}}$ and denote by (C) the representative curve of $f$ in an orthonormal system $(\mathrm{O} ; \overrightarrow{\mathrm{i}}, \overrightarrow{\mathrm{j}})$.

1) a- Determine $\lim _{\substack{x \rightarrow 0 \\ x>0}} g(x)$ and $\lim _{x \rightarrow+\infty} g(x)$.
b- Calculate $\mathrm{g}^{\prime}(\mathrm{x})$ and set the table of variations of g .
c - Calculate $\mathrm{g}(1)$, then discuss according to the values of x the sign of $\mathrm{g}(\mathrm{x})$.
2) Determine $\lim _{\substack{x \rightarrow 0 \\ x>0}} f(x)$ and $\lim _{x \rightarrow+\infty} f(x)$. Deduce the asymptotes to (C).
3) Show that $f^{\prime}(x)=\frac{g(x)}{x^{3}}$ and set up the table of variations of $f$.
4) Calculate the exact value of $f(e)$ and draw the curve (C).
5) Use integration by parts to calculate $\int \frac{\ln x}{x^{2}} d x$.
6) a- For $\mathrm{x} \in\left[1 ;+\infty\left[\right.\right.$, prove that the function f has an inverse function $\mathrm{f}^{-1}$ whose domain of definition is to be determined.
b- Draw ( $\Gamma$ ), the representative curve of $\mathrm{f}^{-1}$ in the same system as that of (C).
c- Calculate the area of the region bounded by $(\Gamma)$ and the three lines with equations

$$
\mathrm{y}=1, \quad \mathrm{x}=\frac{\mathrm{e}+1}{\mathrm{e}^{2}} \text { and } \mathrm{x}=1
$$
